

1) The drop cap letter styling (such as “B”, “F”, or any other leading character in the article content) should match the attached mock-up exactly in terms of size, scale, spacing, and visual proportion. Ensure the typography styling replicates the reference precisely for a consistent editorial look and feel:

Original :

Expected: (text colour should be selectable from CMS)

2)

Make the arrow on the article hero image thinner so it matches the styling of the CTA arrow used at the bottom of the page. Also, reduce the banner height/length on mobile devices to achieve a cleaner and more balanced mobile layout.

3) Remove red lines:

4) Remove the red overlay from the hero image so the visual appears clean and unobstructed, matching the attached reference style.

5) Update the Facebook link behaviour so it opens in a separate/new browser tab. Please follow the interaction shown in the attached reference video.

<https://drive.google.com/file/d/18mJyFNTC82df1QInE8mf7YPWmMYtKMwi/view?usp=sharing>

6) Since the red overlay has been removed from the hero section, refine the spacing and overall visual balance accordingly. Keep the current animation behavior unchanged, but ensure the distance between the bottom of the typography and the viewport remains visually intentional, properly aligned, and responsive throughout the transition sequence across all screen sizes.

7) Add an 18+ age consent cookie/banner to the website. A simple custom implementation is fine if that is faster. Once the user confirms they are 18 or older, store the consent using a cookie/local storage so the prompt does not repeatedly appear on future visits. Ensure the behavior works consistently across all pages and devices.

8) The only red I want in the articles section is the words “The Archive”; everything else will be white.

9) Get Featured” should remain red and should not inherit or be affected by any global text color or highlight changes

10) Update the “About Us” section to support the new image aspect ratios:

- 2:3
- 4:5
- 3:2

The layout should properly accommodate images of these dimensions without breaking alignment, cropping, or spacing consistency.

Also, update the About section using the custom frames/styles that were previously created based on the design reference shared earlier. Ensure the final implementation matches the intended editorial aesthetic and maintains responsive consistency across devices.

https://drive.google.com/drive/folders/1ETct4suHJuOVIFOde4XLgSw3nofyPAEJ?usp=s_haring

11) For the contact us page:

The only red on that page is “Get in touch” and all the way at the bottom the “get featured” circle

12) The newsletter section keep it the same

13) For the submission area change only these areas below

14) Leave the search button area the same

15)

Change the category text color from red to white for “Bare Models,” and ensure all categories displayed in this section consistently remain white.

Also, make the arrow on the article hero image thinner so it matches the styling of the CTA arrow used at the bottom of the page.

16)

Make the arrow on the article hero image thinner so it matches the styling and visual weight of the CTA arrow used at the bottom of the page.

18) The website currently has major compatibility and performance issues on iOS Safari and Android browsers. The site is also breaking on the Android "Internet" browser, as shown in the attached videos.

Required actions:

- Thoroughly test the website across:
 - iOS Safari
 - Android Chrome

- Samsung Internet / Android Internet browser
- Identify and fix all layout breaks, animation issues, overflow problems, spacing inconsistencies, and rendering bugs
- Ensure responsive behavior, transitions, videos, sticky elements, and hero sections function consistently across mobile browsers
- Review browser-specific CSS/JS compatibility issues, especially:
 - position: fixed/sticky
 - viewport height calculations (100vh issues on iOS)
 - video autoplay behavior
 - transform/overflow clipping
 - z-index layering
 - unsupported CSS features
- Optimize performance for mobile devices to reduce lag, flickering, delayed rendering, and animation stuttering
- Validate the final implementation on real devices before client delivery, not only in browser dev tools.

https://drive.google.com/drive/folders/1yWlKjl9_5-fKvSjHalsuP-OkU3rvxHKv?usp=sharing

19) Don't forget we also need the section for the IG bio

20) Increase the speed of this text slider; currently it's slow.

21) Instead of plain text, use the actual logo for both the “Obare” branding and the “The Magazine That’s Real” text to make the design feel more authentic and visually refined. Make the adjustments in the CMS as well. After adding the logo on the plain background (without red), show the current look to the client and then take approval.

<https://drive.google.com/drive/folders/1g-CJA1qEALMe4ARQ4lHWJ9PXAgRI5YkA?usp=sharing>

22) This heading in the DECK , should have a clear hover state, with an underline animation appearing beneath it on hover. It should also be fully clickable and linked similarly to the “Go Bare” CTA.

23) The video should autoplay on mobile devices to improve the initial user experience and avoid blank or delayed hero states when the browser fails to load the first frame. On desktop, keep the existing playback behaviour and current settings unchanged.

24 Remove the arrow icon and hover interaction from this section since it is not currently linked. Before applying the change, verify the CMS settings to ensure no active or planned link functionality depends on it.

25) Add CMS controls to allow editing the text content and switching the text colour between red and white for both “In Motion”, “The Moving Picture”, and the associated paragraph text. Ensure the colour settings can be managed independently through the CMS for better design flexibility.

<https://obare.vercel.app/reels>

26) While scrolling on mobile devices, the header should remain transparent instead of switching to a solid background, ensuring a cleaner and more immersive viewing experience.

27) On the article page, add a dedicated image / video credit line to every image, positioned consistently in the same location as indicated in the reference provided below. The image credit text should also support linking/interlinking functionality where required.

28) The logo positioning and hamburger menu lines should match the Line Studio reference exactly, including alignment, spacing, proportions, and overall visual appearance. The line styling and interaction behavior should also remain consistent with the Line Studio implementation.

29) Add the “Go Bare” CTA on both the left and right sides of the article detail page, ensuring the placement feels balanced and integrates cleanly with the page layout.

30) Add a CMS-controlled highlight option that allows the client to switch the highlight style dynamically between yellow and multiple red variations depending on the design requirement.

Highlight color options:

- Yellow: #f0ff0a
- Red 1: #84151b
- Red 2: #aa272d
- Red 3: #de0c07

Ensure the highlight colour can be selected independently from the CMS for flexible content styling.

31) Currently, we are using ** within the deck to apply red-highlighted text. The client has now provided a finalised set of approved red colour variations that should be available globally across the website wherever this text highlight capability exists.

These colours should be configured as selectable text highlight options within the CMS text editor/property settings, allowing them to be applied to any text element across the site, including:

- Article detail pages
- Main deck sections
- Editorial content
- Highlighted typography blocks

Approved highlight colours:

- Red 1: #84151b
- Red 2: #aa272d
- Red 3: #de0c07

Recommended implementation:

- **Apply these highlight colors throughout the website where the current * highlight styling is supported**
- **Preview and validate the visual output with the client first**
- **Once approved, permanently register these colours in the CMS as reusable selectable highlight presets for all supported text fields/components.**

32) In the “Most Popular” section, all cards should follow the same content structure and formatting as Card No. 3, both on the frontend and within the CMS configuration.

Each card should support:

- Title
- Category
- CTA
- Optional paragraph text

The paragraph field should not be mandatory, and the current CMS/frontend logic should be updated because the formatting and settings are not being applied consistently across all cards.

33) Update the credit section at the bottom to match the styling and layout of the attached reference example, ensuring the typography, spacing, alignment, and overall visual presentation remain consistent with the provided design.

34) Update the homepage hero banner section to match the look and feel of the attached reference, without using a background. Ensure the spacing and overall composition closely follow the example, including balanced top, bottom, left, and right padding/margins for a clean and premium layout.

35) **Overall CMS Review & Validation**

Perform a thorough end-to-end CMS audit to ensure all editable content and styling controls are functioning correctly before the client demonstration.

Key requirements:

- Verify all text editing capabilities, including newly added bold/highlight formatting operations
- Ensure all website content elements are exposed as editable CMS fields, except form submissions/forms themselves
- Ensure each page contains all relevant editable fields within the CMS so the client can fully manage content without developer dependency
- Identify and fix pages where text content is currently hardcoded or missing CMS access
- Investigate why the homepage banner image and inner page banner images are not updating dynamically from the CMS
- Validate that all CMS-connected content updates reflect correctly on the frontend
- Check consistency of:
 - Typography controls
 - Highlight color selections
 - CTA fields
 - Image uploads
 - Article content
 - Section visibility/settings
 - Card structures
 - Responsive behavior

Before client presentation:

- Thoroughly test every editable component, section, and CMS mapping
- Confirm there are no disconnected fields, stale cached content, broken bindings, or frontend inconsistencies
- Ensure the CMS experience is scalable, clean, and fully manageable across all pages and sections.

Images for test on homepage banner:

<https://drive.google.com/file/d/1C75gvaaxfxeNDbn21UNd3U6KaBZVz2ht/view?usp=sharing>

36) On the Submissions page, remove the entire form section and keep only the supporting text below it:

“Files (images, PDFs, video links) can be sent to editorial@ObareMag.com”

Ensure the remaining text is properly aligned and styled to fit the page layout cleanly after the form removal.

FULL NAME *
Your name

EMAIL *
you@example.com

INSTAGRAM HANDLE
@yourhandle

Select a category

SUBJECT / TITLE *
What are you submitting?

PITCH / MESSAGE *
Tell us about your work, your vision, and why it belongs in OBARE.

37) Remove the “Tap the card to continue” text from the article detail page.

38) Remove the content guideline from the footer section.

39) Update the footer label from “Submit Work” to “Submissions” so it matches the naming used in the header navigation.

40) In the footer, keep the existing old Events page as it currently is. Below the event listing section, add the same active form that is currently linked through the header navigation.

Requirements:

- Reuse the exact same form structure and functionality from the header-linked page
- Place the form below the event list on the existing footer Events page
- Ensure all form submissions are sent directly to the client’s email
- Maintain consistent styling and spacing with the rest of the page layout.

A screenshot of the "OBARE EVENTS" sign-up form. The form is titled "OBARE EVENTS" and "EVENTS". It includes a sub-header: "Get first access to OBARE events, launches, and private gatherings." The form fields are: "FULL NAME" (with placeholder "Your name"), "EMAIL" (with placeholder "you@example.com"), and "INSTAGRAM HANDLE" (with placeholder "@yourhandle"). Below these fields is a section titled "WHAT KIND OF EVENT INTEREST DO YOU HAVE?" with a list of options: "Launches, art nights, workshops, editorial showcases...". At the bottom, there is a checkbox for "I confirm that I've read and agree to the Privacy Policy" and a red "NOTIFY ME" button.

41) Remove these red lines.

42) No sound icon on desktop

43) 301 Redirects need to be linked from old website to the new next.js site.

Note:

Since the new website is built on Next.js and the old one was on Webflow, the 301 redirects do not automatically transfer. We need to manually recreate the redirects from the old URLs to the new URLs to preserve SEO rankings, backlinks, and avoid broken pages.”

to let you know:

If the domain is still connected to Webflow → redirects can temporarily remain active there.

Once DNS/domain fully points to the new Next.js hosting (like Vercel, Netlify, or custom server), Webflow redirects stop working entirely.

At that point, all 301 redirects must be configured on the new hosting/server level.

For Next.js specifically, redirects are usually added in:

next.config.js

Middleware

Hosting platform redirect settings

My old site was called SundayMorningView

We had a recent name change so we need to make sure when people look for SundayMorningView on google or type in SundayMorningView.com it takes them to Obaremag.com.⁴⁴ 44) The titles need to be clickable to the article. I didn't see that.

45) Add embedded video and image carousel sections to the article details page, similar to the homepage TikTok/Instagram-style media section, with support for uploading and displaying both photos and videos.

Videos: <https://drive.google.com/drive/folders/1wVR-mLRfmCIAagcGIsElXw8S68xl293-?usp=sharing>
